Summary

Software Engineer with 5 years of experience modernizing legacy systems and automating workflows in the financial sector. Led front-end modernization through Angular development for a new Cash-in-Transit platform. Salesforce specialist skilled in combining low-code tools with custom Apex & LWC development to deliver scalable solutions, including a mobile app and REST API that automated security workflows, improving operational efficiency and reducing manual effort.

Experience

Job

Itaú Unibanco | *São Paulo, Brazil (hybrid)*

11/2020 – 09/2025

Collaborated with cross-functional teams in an Agile environment to the stability and modernization of critical banking systems. This included troubleshooting complex legacy applications, leading server migrations, and developing new modern platform features. Most recently, I have focused on engineering automated Salesforce solutions, to manage security and infrastructure workflows efficiently, with additional support for AWS-based integrations.

- **System Analysis & Troubleshooting:** Diagnosing and resolving issues within complex internal systems (branch manager system), ensuring system stability and performance. Led on-premise server setup, and migrations for ASP applications, resulting in a reduction in downtime incidents and improved service continuity.
- **Legacy System Modernization:** Key contributor to projects aimed at replacing outdated systems, including front-end (Angular) development for a new Cash-in-Transit platform, accelerating transaction processing times and enhancing user experience.
- **Cloud Application:** Familiarity with AWS services, including collecting logs and providing support for API integration projects, which improved incident response time and streamlined cross-system communication.
- **Salesforce Development:** Designed and implemented automated business processes using Flows, Approval Processes, and Apex Triggers. Built a custom mobile application with LWC and a REST API to automate security workflow occurrence generation, cutting manual reporting and increasing operational efficiency.

Skills: JavaScript, Angular, AWS, SOQL, LWC, APEX.

General Motors | *São Caetano, Brazil (on-site work)*

04/2019 – 12/2019

Responsible for controlling and monitoring vehicle orders and production across South American plants, ensuring alignment between demand, scheduling, and delivery.

- Developed and implemented a VBA automation tool to manage and monitor weekly vehicle production schedules, reducing manual input time and improving reporting accuracy across South American plants.

Skills: Excel, VBA.

Education

Bachelor's Degree in Science and Technology – UFABC, Brazil (2012 - 2017)

Bachelor's Degree in Science and Technology (Sandwich Course Program) – WSU, USA (2014 - 2015)

Bachelor of Science in Materials Engineering – UFABC, Brazil (2017 - 2020)

Postgraduate Certificate in Full-Stack Development – PUC-RS, Brazil (2025 - 2025)

Languages

English: Professional Working Proficiency

Portuguese: Native

Licenses & certifications

Salesforce Certified Platform Developer I - Salesforce, 2025

Salesforce Certified Administrator - Salesforce, 2023

Junior Full Stack Developer (480 hours) - Generation Brasil, 2020

OmniStack11 Week (React | Node) - RocketSeat, 2020

Web Front End & React (48 hours) - Let's Code, 2020

8 Week Summer Session (112 hours) - ELI (WSU), 2014

Skills

ANGULAR | APEX | AWS | CI/CD | Devops | Docker | Express.js | Git | JAVA | JavaScript | LWC | MongoDB | Node.js | SQL | React | REST | Scrum | TypeScript
